Report No.: T140924D09 - MF Date of Issue: September 26, 2014

According to KDB 447498 section 4.3.1, the 1-g SAR test exclusion thresholds at test separation distance ≤ 50 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] *-[$\sqrt{f(GHz)}$] ≤ 3.0

The tune-up power is 6 dBm +/- 2dB, therefore the highest tune-up power is 7.1 dBm (5.13 mW) @ 2405 MHz

When the minimum *test separation distance* is < 5 mm, a distance of 5 mm according to 5) in section 4.1 is applied to determine SAR test exclusion.

```
So, ( 5\text{mW} / 5\text{mm} ) * ( 2.4\text{GHz} ^0.5 ) [(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)] * [\sqrt{f(\text{GHz})}] = 1.6 < 3.0
```

Therefore, standalone SAR measurements are not required for both head and body.
